
After completing **Module 3: Advanced SQL**, you will:

- Understand how the run scoring environment has changed throughout the different eras of baseball
 - Understand a key axiom in sabermetrics: the important relationship between the number of runs a team scores, the number they allow, and the number of games that they will win
 - Using baseball data, understand the basics of bivariate analysis, namely the basics of correlation & dependence
 - Understand the use of JOINS combining records from two or more SQL tables using the Lahman baseball database
 - Understand the important influence of F.C. Lane to sabermetrics and to the game of baseball
-
